ABOUT

PROSTHETICS & ORTHOTICS
Complete Range of Hi-Tech Prosthetic, Orthotic and Rehab Products

Rebuilt is the India's premier provider of orthotic and prosthetic (O&P) services and products, offering the most advanced prosthetics and orthotics, clinically differentiated programs and unsurpassed customer service.

Our Vision and Mission

To be the partner of choice for services and products that enhance human physical capability.

To provide our patients and customers with valued rehabilitative products and services in a caring and professional manner.

Rebuilt Delivers a Full Spectrum of Integrated Rehabilitative Solutions. Rebuilt is now one of the largest rehabilitative product and service organizations in India. We work with clinicians, providers and patients to ensure people receive the best possible products and services so they can do the things they want to do. This is the rehabilitative care model of tomorrow, brought to you today by Rebuilt.

Realizing Our Potential

At Rebuilt we care about empowering human potential – for our patients, partners and associates. Over the past 15 years, Rebuilt Sister Concern (CFU) Central Fabrication Unit has built unrivaled industry leadership in Orthotic and Prosthetic patient care.

In modern orthopaedic technology, prosthetic fittings are mainly done with gel liners for many years now. Since the early beginnings up to today, the specific characteristics of polymer gel have been expanded to meet the manifold demands of orthopaedic technology and now for a product line of liners with great variety.

COMPRESSION GARMENTS

Elastic compression garments are worn by a person with lymphedema on the affected limb following complete decongestive therapy to maintain edema reduction and to compress the arm or leg and encourage the flow of lymph fluid out of the affected limb. Depending on the therapist's discretion, a compression garment may be custom-fit or purchased in over-the-counter, standard sizes. Compression garments are meant to be worn twenty four hours a day, every day to maintain edema reduction and must be replaced on a regular basis. It is very important that the patient obtain a correct fit for their compression garments by getting professional help. Some people will require custom-made compression garments and it is important that these garments fit correctly.
